## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 12 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saylor et al. (US 6,400,265).

**Regarding claim 12,** Saylor et al. disclose an area security system for home security and vehicle security in an area (figure 1), comprising:

a central security device (130) that monitors a vehicle (112) and at least one home (110) in a predetermined area (col. 4, lines 55-65);

an on-vehicle device that has a sensor to detect unusualness of the vehicle, a location device (GPS) to detect the location of the vehicle and an on-vehicle communication device to communicate with the central security device (figure 1; col. 4, line 66 through col. 5, lines 1-31); and

at least one home security device that has a sensor to detect unusualness of a respective of the at least one home and a home communication device to communicate with the central security device (figure 2; col. 5, lines 50-61).

Saylor et al. disclose the instant claimed invention except for: the central security device (130), receives alarm signal and position signal transmitted from the on-vehicle,

will instructs the at least one home security device in the area to notify the unusual situation. Since Saylor et al. disclose the home security device and on-vehicle security device are linked to the central security device, and when an alarm situation is detected, the central security device receives alarm information, processes the alarm situation, and alerts notification to a user (160) via Internet (150) and POTS (152) or to police/fire department/rescue squad (164, figures 1-3), it would have been obvious to a person having ordinary skill in the art at the time the invention was made to know that when the central security device receives the alarm information transmitted from the on-vehicle device, it will relay the unusual situation to notify the user about that situation in order to alert the user that his/her personal property has been stroke by a burglar.

**Regarding claim 14,** Saylor et al. disclose the use of a wireless connection to notify the central security device of the occurrence of the unusual situation from the on-vehicle device (figure 2).

**Regarding claim 15,** refer to claim 12 above.

**Regarding claim 16,** the claimed method steps would have been inherent in the product structure as stated in claim 1. Saylor et al. further disclose a step of storing a notice destination to which information is sent when the unusual situation is detected by a first security terminal and an additional notification means for notifying a plurality of security terminals (162(1) ... 162(n), col. 7, lines 45-65), and further notification means for updating the associated user databases (figure 1; col. 7, lines 25-65).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Saylor et al in view of Ozery (US 5,892,442).

**Regarding claim 13**, Saylor et al. disclose the instant claimed invention except for: a threatening element for threatening against the occurrence of the unusual situation operated on the basis of control by the central security device. Ozery teaches a monitoring device (30) for a security terminal (12) being able to provide a warning authorized personnel and frighten away unauthorized intruders (col. 4, lines 55-60). Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to utilize the threatening element as taught by Ozery in the system as disclosed by Saylor et al., as modified, for the purpose of threatening against the unauthorized intruders in order to keep them away from the owner's properties.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

**Conclusion**

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
